## PREFACE

The idea for this book came to me during the Covid-19 lockdown of 2020. In May of 2020, when CXC announced that most of the examinations for CSEC in July of that year would be paper 1 and SBA, I decided to work on a CSEC Mathematics Multiple Choice textbook. From past experience in setting multiple choice examinations for course work and end of term examinations, I had gathered the knowledge and I.T. skills needed to prepare my own multiple choice textbook.

I joined the Teaching Service in Trinidad and Tobago in 1995 as a Teacher of Mathematics and in 1997 I got a part time job teaching Mathematics to repeater students at a private Secondary School. At one point in time I was working part time at three private Secondary Schools while I was full time at a Government Secondary School. With repeater students, a lot of work needed to be done in a short space of time, from September to April the following year in order to ensure that they improved their grades. About three to five years of work had to be covered in this short space of time, so I designed my lesson plans and methods of teaching in such a way that I assumed they knew absolutely nothing in Mathematics. This meant that a tremendous amount of work had to be done on the board and adequate home work given regularly and corrected in order to make sure that students learnt something. I started from basic concepts in all of the CSEC Mathematics topics to make sure that most of the students understood the foundation work before proceeding to harder topics.

My lesson plans, assignments and methods of delivery helped me to be effective in the classroom and I was able to pitch the work for the mathematically weak students. Most repeater students often tell me that it was the first time that they actually understood certain topics. I have worked at public and private Secondary Schools in north, central and south Trinidad, so I got the opportunity to interact with students of all types of socioeconomic backgrounds with different levels of intelligence.

At the private Secondary Schools where I worked at in the past, I was able to teach a wide array of subjects which broadened my view, knowledge and experiences. I taught Additional Mathematics, Biology, Human and Social Biology, Physics, Integrated Science, Geography, Commercial Numeracy, SAT Mathematics, GMAT Mathematics, GRE Mathematics, Introductory Statistics for the Behavioural Sciences, Introduction to Statistics for Psychology, Introduction to Quantative Methods for the ABE program, Computer Literacy, PowerPoint Presentation, Microsoft Word and Graphics Design. In China, I taught Oral English, Conversational English, Business English and Tourism English. I also have the knowledge to teach Social Studies, History, Principles of Business, Economics, Sociology, Psychology, International Relations and Politics.

This book will help form four, form five and repeater students to develop skills, techniques and speed in answering multiple choice questions for the CSEC level. In the top Schools where students start form four work in form three, this book will benefit them.

I wish to dedicate this book and the others in the series to my nephews and nieces Christon, Joel, Natalia, Faith and Paris (Popo).

## ABOUT THE BOOK

This book covers multiple choice questions based on the topics outlined in the CSEC Mathematics syllabus. There are answers at the back of the last chapter to help those who use this book. Students are advised to check the answers after a test is completed. Attempts should be made to do over any wrong problems until the correct answers are found. There are some questions throughout the book that students are required to write answers for. This was purposely done to reinforce basic mathematical concepts and help students to build memory.

This book is designed for all form five students and all repeater students who are currently taking CSEC Mathematics examinations. Form four students who are keen on developing their multiple choice skills early, instead of waiting for the last term in form five, will benefit from this book. There are some Schools where form three students are introduced to form four topics. This book will help them to develop skills early.

A tutor is not needed if someone wants to use the book independently. Teachers who are giving crash courses can use the book with their students and they will be able to work through all the tests within a week. Anyone who uses this book will learn something and those who enjoy doing Mathematics will benefit tremendously.
